

Electrostatic Dust Print Lifter

NEW! Electrostatic Dust Print Lifting Kit

This newly designed dust print lifting kit consists of a high-voltage control unit, a nickel-plated-steel ground plane and a metalized lifting medium.

It requires the use of only one metalized plastic sheet and a metal ground plane. When high voltage is applied to the lifting mat, it takes on a negative charge and the ground plate becomes positively charged. Any dust that is present under the mat becomes positively charged and is then attracted to the negatively charged collection mat resulting in an image that is a precise mirror of the original.

This new device will lift prints from most any surface including carpet, tile, wood and metal. It even lifts prints from rough-surfaced and irregular flooring.

DPL1000 comes with:

- 1-Electrostatic Voltage Control Unit
- 1-Ground Plane, Nickeloid Steel 4" x 6"
- 1-Ground Plane Polycarbonate Insulating Sheet 5" x 7" x 0.01"
- 5-Metalized Pickup Mats in protective tube (24" x 36" x .0014")
- 1-Insulated Mat Roller
- 1-9-Volt Alkaline Battery
- 1-Technical Information Packet
- 1-Static Discharge Cable
- 1-Molded Carrying Case

CATALOG NO.	DESCRIPTION	PRICE
