

# Visible Detection

## Visible Detection

### APPLICATION

Visible stain detection powder is carefully dusted on a pocketbook, wallet, drawer, door-knob, safe vault or other object which the thief is likely to touch.

On outdoor surfaces, such as railroad car doors, garage locks, etc., a paste solution of the compound may be used.

To camouflage the detection powder, choose a powder or paste of the same color as the object in question.

Place dark-colored powders or pastes on dark-colored objects and light-colored powder or pastes on light-colored objects.

For instance, on dollar bills, use Ace's Visible Detecto Powder, #0193 that has the natural color of green. Spread evenly over the entire surface.

### ALWAYS WEAR GLOVES!

If the criminal suspects the possibility of a trap, he will most likely attempt to wash off the dye immediately—so the nearest sink should be within the observer's zone of surveillance.

Some stains can be almost completely washed away by repeated scrubbing with abrasive hand soaps.

However it is very difficult for the suspect to remove stains from under fingernails, within flexure lines, near knuckles and at the base of the fingers.

Apply to objects with an applicator brush or spray using an atomizer. If powder does not blend well with the surface, apply an even coat over the entire surface, rather than to a small portion of the object.

### EXAMINATION

When the thief touches the treated object, traces of the stain material will cling to his or her hands or body.

Speckles of the stain color will appear upon contact with the perspiration exuded by the sweat pores.

Upon noticing this, the perpetrator may wash his hands—causing the stain to spread further.

\* WARNING: Visible stain products cannot be removed from surface applied to.

Apply Ace's three-day detection fluid to most non-absorbent surfaces, such as tools or credit cards.

## Three-Day Detection Fluid\*

Three-day detection fluid is transparent and easily applied to any non-porous surface. Three-day detection fluid will not dry for an extended period of time because of its viscosity. The fluid causes stains on the suspect's hands by reacting with amino acids exuded in the perspiration. A deep purple stain will be visible and will remain on the skin for days. Apply to any non-porous surface with a cotton swab.

# Visible Detection

Ace's visible stain detecto powder is ideal for use indoors on a variety of surfaces, from coin wrappers and cardboard to cash boxes.

## Visible Stain Detecto Powder\*

Apply a small quantity of the visible stain detecto powder to money, cash boxes, lockers, cardboard, wood, or other items. The thief's hands will develop a visible stain within minutes after touching the object under surveillance. Apply with a brush. Not recommended for use outdoors. Choose a powder by selecting a color similar to the color of the item to which it will be applied. The stain is the color you will see on the thief's skin.

CATALOG NO.	POWDER COLOR	STAIN COLOR	VOLUME	PRICE
0190	Silver Detecto Powder	Purple	2 ounces	
0191	Mahogany Detecto Powder	Blue	2 ounces
