

Latent Fingerprint Powder Brushes

Down Feather Brush

Ideal for covering large areas, such as cars and walls. It's soft, with no large, stiff feathers (quills). Spread powder in one quick sweep with this brush, then touch-up the area with one of our other brushes. Comes with protective cover and cap.

Camel Hair/General Purpose Brush

Our camel hair brush is an outstanding general purpose fingerprint powder brush. Made of selected, high-quality camel hair, it is universally recognized for its versatility and durability. Fine hair selection eliminates scratching. Permits development without distortion. Comes with protective cover and cap.

Maxi-Tech Brush

Don't worry about ridge destruction with our maxi-tech brush, which will let you work quickly and efficiently. The brush's wide bristle is excellent for covering large surfaces. Easy grip with molded plastic handle provides complete powder control. Comes with protective container and cap.

Tech Brush

This is one brush you can always depend on. It's a great all-purpose brush and it features a wide bristle. Superb hair selection and concentrated width. Comes with protective container and cap.

Fiberglass Brushes

catalog #1563A

catalog #1563

Brushes are shown actual size

Standard Fiberglass Brush

Made from the finest quality fiberglass filaments, this brush is one of our most popular. Thousands of specially selected and treated filaments form a soft cluster which will hold a generous amount of latent print powder. Eliminates the constant powder replenishment required by most conventional brushes. The handle is made of machine-knurled aluminum so it won't slip out of your hand. Comes with a protective case.

Kit Size Fiberglass Brush

A reduced handle length makes this brush an exact replacement for conventional brushes found in most fingerprint field kits now in use.

Latent Print Powder Brushes

Catalog #1507

Carbon Filament Brush

Carbon filament latent print brushes feature the very latest in latent print development technology. Carbon fiber brushes are unequalled because carbon fibers are naturally smooth and feature a low friction quality. In addition, carbon fibers are corrosion- and moisture-resistant—ensuring the finest brush even in extremely high humidity. The fine-diameter filaments are randomly layered—allowing the user to quickly change powder colors simply by shaking the brush free of initial powder.

The brush is the softest cluster brush available—comprised of tens of thousands of specially selected carbon filaments. The brush features an anodized aluminum, machine-knurled handle with superb balance for complete powder control. Each brush is individually packaged in a plastic tube with cap.

Long Handle Brush

This is the finest, high-quality, long handle latent print brush available. It is produced from selected, high-quality camel hair for latent powder applications only. The fine hair selection eliminates scratching ridge details. The handle is balanced for easy use. The 1509 brush is supplied with a protective container and cap. The brush dimensions are 9" x 1/2" dia. (22.9cm x 1.3cm dia.).

Fiberglass Brushes

Retractable Fiberglass Brush

If you frequently use a Fiberglass brush for dusting latent prints, then you'll want to try our retractable model. The retractable fiberglass brush is perfect for frequent use because it is housed in an aluminum casing which protects it from dirt and moisture. That's why it will last a lot longer than most of your other brushes and it won't spread powder all over your kit. In addition, you can control the size of the cluster simply by adjusting the casing. 6¾" overall.

Maxi-Fibersweep

Ace's Fiberglass sweeper brush is an excellent choice for processing automobiles, doors, windows, desktops and other large surface areas. It features the same high-quality Fiberglass filament brush surface as Ace's other fiberglass brushes. The brush's precision-machined handle makes it very balanced and comfortable to hold. The brush is supplied with a plastic storage container.

- Features:
- Precision-machined and balanced handle
 - Thousands of "soft-cluster" fiberglass brush elements
 - Excellent powder retention
 - Large area processing, 4" wide sweep

The fiberglass sweeper brush features balanced control.
